SPORICIDAL WIPES

The answer to combating *Clostridium difficile*,
effective reduction of CDI rates

Clinell Sporicidal Wipes' unique technology generates peracetic acid on demand and is effective in dirty conditions¹.

SPORICIDAL WIPES

Peracetic acid generating disinfectant wipes, activated by water, for surface disinfection and cleaning of non-invasive medical devices.

PATENTED FORMULA

Comes in a stable form that delivers peracetic acid on demand. Peracetic acid is a safe alternative to chlorine, providing similar or better performance against spores².

SIMPLE AND EASY TO USE

Just wet with water to activate the dry wipes – no more dilution errors. Generates no toxic fumes and can be used next to patients.

CONTAINS DETERGENT

Clinell Sporicidal cleans and disinfects. Peracetic acid remains effective in highly soiled conditions – unlike chlorine and glutaraldehyde based products which are inhibited by dirt and organic matter².

SAFE TO USE ON MOST SURFACES

Clinell Sporicidal Wipes are a Class IIb medical device. With a near neutral pH, they can be used on non-invasive medical devices and equipment without corrosion – unlike chlorine solutions.

COST EFFICIENT

A study by the Royal Free Hospital in London demonstrated that after the introduction of Clinell Sporicidal Wipes there was a 70% drop of CDI rates⁴. The cost per patient for treating CDI is around \$7,000⁵. The decrease in CDI incidence since the introduction, multiplied by this amount, equates to a saving of \$1,100,000 per annum⁴.

PROVEN TO BE FASTER

Faster and more effective at reducing spore counts than chlorine solutions⁶.

ANTIMICROBIAL ACTIVITY

Powerful disinfecting composition using a pH optimised peracetic acid and hydrogen peroxide combination, generated from sodium percarbonate and tetra acetyl ethylene diamine.

UNIQUE WALL MOUNTED DISPENSERS

Hygienic and accessible, for quick and easy wipe dispensing. Designed to increase compliance by conveniently placing wipes at their point of use.

Dry before activation, each wipe consists of 2 non-woven fabrics bonded together with a unique powder combination in the middle layer.

Water activates the powder to generate high levels of hydrogen peroxide and peracetic acid.

This unique method of application ensures consistent efficacy, with no dilution errors.

**Effective against
Clostridium difficile
associated disease⁴**
